Custom Material Handling Solutions

## STACKERS/DESTACKERS

Stackers and destackers are used to easily optimize the storage of heavy and unwieldy materials. Our engineers design heavy duty stackers customized to fit and stack virtually any size or weight combination with speeds varying from 2-3 units per hour to several units per minute.

We design stackers that are ideal for handling and organizing standard or custom pallet designs, as well as many stackable raw materials. These stackers can be integrated with or without controls.

Tuff provides many different types of stackers:

- Pneumatic
- Electric
- Hydraulic
