

## CDLR Roller Conveyor

Heavy Duty • Made in USA

**TUFF** Chain Driven Live Roller conveyors are ideal for transporting heavy items such as loaded pallets, tires, and barrels. CDLR works in conditions unsuitable for belt driven conveyors. Each roller is driven by chains running from roller to roller over sprockets. Rollers are held in place between two structural frames either by internal springs or retaining pins. Bolt-on or weld-on structural channel legs can be provided to satisfy any fixed height requirement.

### Key Features

- Positive Drive - Every roller is driven
- Quiet operation
- Wide variety of loads
- Low Maintenance
- Easy integration with other types of pallet conveyor
- Built to customer specification
- Capable of accumulating products with minimum back pressure
- Built to customer specification
