## BELT CONVEYORS

A belt conveyor offers a versatile means to transport a wide range of products, such as totes, cartons, parts, and odd-shaped items. Belt conveyors are good for progressive assembly, sorting and packing, inspection, inclines, declines and curves. When a belt conveyor is the best choice for a customer's application, Tuff Automation has the experience and expertise to design, build, and install the system with the specific components that exactly meet the project requirements:

- Belt type, including PVC, polyurethane, plastic modular belting, and more
- Drive and motor type, mounting location, and speed
- Electrical – wiring, panel build, controls design, and programming
- Pneumatic – design and assembly
- Frames, supports, guides, guarding
- Components and design to meet all safety requirements
